

Stainless steel product

Maintenance guide

Stainless steel has a high content of chromium, which gives the steel its resistant surface

Daily cleaning

For daily cleaning, use a damp cloth soaked in a solution of warm water and a mild detergent

Extra cleaning

For extra cleaning, use household rubbing alcohol. This will also sanitize the surface. Always follow the direction of the steel grain

Rust stains and minor scratches can be removed by polishing the surface with a very fine sanding sponge for metal. Always follow the direction of the steel grain

Advice

Stainless steel will develop patina over time. Minor rust stains may appear on stainless steel caused by particles from other objects

Never use chlorine-based cleaners on steel, as this will cause rust
